

The Early Childhood Curriculum Inquiry: Learning Through Integration

The early childhood curriculum inquiry is a process of inquiry that is used to develop and improve curriculum in early childhood settings. This process involves the use of a variety of methods, such as observation, reflection, and discussion, to gather information about children's learning and development. This information is then used to make decisions about the curriculum, such as what topics to cover, what activities to use, and how to assess children's learning.

The early childhood curriculum inquiry is based on the belief that children learn best through active, hands-on experiences. This means that the curriculum should be designed to provide children with opportunities to explore, experiment, and play. The curriculum should also be responsive to children's interests and needs, and should be designed to help children develop holistically, in all areas of their development.
